

Make Your Website Come Alive Using Advanced Functions. But Don't Worry - Anyone Can Do This!

Let Me Show You How You Can Use Javascript And PHP To Enhance Your Website. I Even Supplied The Scripts. This Is So Easy Anyone Can Do It. Plus Learn How To Install PHP Scripts.

Friday, January 21, 2011

From The Desk Of: XXXXXXXXXXXXX

Dear Reader:

Before you read any further, let me say that this is not a video series that intends to teach you how to write your own PHP or Javascript code. That is not what it is about at all. So go ahead and read on...

Have you ever created your own website or purchased a website as part of a PLR or resale rights pack and wanted to make it better without having to do a ton of work? Hey we've all been there.

An easy way to do that is to use some scripts that you can embed into your website and add the functionality that you are after. Fortunately this is quite easy to do once you know how.

The possibilities are almost endless.

You can add functionality to your website using Javascript that does all the processing on the local computer. It does not communicate with the server when it does the processing **which allows for very quick results on your website**.

On the other hand, **PHP does communicate with the server and the processing is done on the server side**. This enables you to access server data and create dynamic content on your pages.

This is as simple as copy and paste. I have included everything you need!

I will show you exactly how to implement some useful functionality into your site.

All you have to do is follow the simple instructions in my video series.

Here is just some of what you will learn:

- How to use Javascript on your site
- How to play a sound when someone visits your site
- How to integrate PHP into your site
- How to install a PHP script on your server.

and much more.....
