VidAnalytics Is Your Companion Solution to Google Analytics for Tracking Embedded Video Usage on Site!

VidAnalytic Plugin is the Ultimate analytics suite that provides bloggers with live tracking, insightful data, and analysis of what videos are truly consumed on their sites. It not only allows you to track all your embedded videos to all the pages on your site without making any changes to your template, but it also provides you with an admin dashboard login with access to detailed video statistics. The dashboard also allows for deeper analysis of metadata derived from all your user engagement.

Read through the list of all the features below to get a feeling of what this plugin can do. All of the features are enabled natively.

- Features:**
- Automatic tracking of all embeds without having to make changes to your templates.
 - Supports tracking for single domain, multiple top-level domains, and subdomains.
 - Ability to create channels to track multiple sites.
 - Ability to create a single use embed for tracking on and off the WordPress site.
 - Content Discovery tool.

- Tracks the Following:**
- Video Performance trending
 - Video Play Starts
 - Video Play minutes of engagement
 - Video view to 50% completion
 - Video Play Completes
 - Aggregate Video Playtime
 - Video view analysis by Geo/Country/City
 - Video view analysis by browser, OS
 - Video views by embedding domain
 - Video Views by embedding URL

Take metadata analysis from VidAnalytic and dive into what other videos on YouTube also matches your user's interests. Program them using our quick embed tool or just grab the youtube link off of the Youtube site.

Perfect complementary analytics platform for Google Analytics, Omniture, Urchin or any other website analytics platform.

BONUS Keep Your Traffic's Attention

A picture is worth a thousand words. How many words is a video worth? **Featured Video Plus** enables you to define Featured Videos, which, if set, take the place of Featured Images. There are three ways to get the videos onto your page:

- If your theme already makes use of **Featured Images**, these will in most themes automatically be replaced by your **Featured Videos** if available. Alternatively you can
- Insert the **[featured-video-plus]-Shortcode** in your posts or
- Manually make use of the **PHP functions** in your theme's source files.

Instead of option 1 the plugin can also request the videos using an AJAX request when the featured image is clicked. This reduces load times and gives you the flexibility to display videos in a lightbox to ensure your theme does not break.

Beside your **Local Videos** (mp4, webM & ogg/ogv) you can use videos from **YouTube, Vimeo and Dailymotion**. If you miss a certain video platform: Leave me a note. For YouTube and Dailymotion the plugin also features time-links.

The plugin adds customization options to your Media Settings. Beside aesthetic individualizations for each video platform's player you can turn off automatic integration, turn on autoplay, define your Dailymotion Syndication Key and tweak video sizing. By default videos try to dynamically fit their parent containers width.

Use Video to your **Advantage** & get **Results** with this Awesome VidAnalytics & Professional Video Plugin Package!
