Preface

- What this book covers
- What you need for this book
- Who this book is for
- Conventions
- Reader feedback
- Customer support
  - Downloading the example code
  - Errata
  - Piracy
  - Questions

1. Enter SQLite

- Why SQLite?
- The SQLite architecture
  - The SQLite interface
  - The SQL compiler
  - The virtual machine
  - The SQLite backend
- A quick review of database fundamentals
  - What is an SQLite statement?
  - The SQLite syntax

Datatypes in SQLite
Storage classes
The Boolean datatype
The Date and Time datatype
SQLite in Android
SQLite version
Database packages
APIs
The SQLiteOpenHelper class
The SQLiteDatabase class
ContentValues
Cursor
Summary
2. Connecting the Dots
Building blocks
A database handler and queries
Building the Create query
Building the Insert query
Building the Delete query
Building the Update query
Connecting the UI and database
Summary
3. Sharing is Caring
What is a content provider?
Using existing content providers
What is a content resolver?
Creating a content provider
Understanding content URIs
Declaring our contract class
Creating UriMatcher definitions
Implementing the core methods

Initializing the provider through the onCreate() method
Querying records through the query() method
Adding records through the insert() method
Updating records through the update() method
Deleting records through the delete() method
Getting the return type of data through the getType() method
Adding a provider to a manifest
Using a content provider
Summary
4. Thread Carefully
Loading data with CursorLoader
Loaders
Loader API’s summary
Using CursorLoader
Data security
ContentProvider and permissions
Encrypting critical data
General tips and libraries
Upgrading a database
Database minus SQL statements
Shipping with a prepopulated database
Summary
Index

About the Authors

Sunny Kumar Aditya has been working on the Android platform for the past 4 years. His tryst with Android began with his college project, and he continued with his work in R&D at HCL Infosystems Ltd. Sunny loves to stay up to date with the latest trends and practices in Android development. Apart from building Android applications, he writes at www.deadmango.com. He is currently the head of Android development at Yamunix.

I would like to thank Packt Publishing for this opportunity and my family as well as friends for their support.

Vikash Kumar Karn is an IIIT Allahabad alumnus and an ECE student whose love for code drove him towards the software development field. He has worked with leading multinationals and is currently working at Samsung Research Institute, Bangalore, exploring Android.

Vikash likes to learn the intricacies of the Android framework and help newcomers in this field. Some of his applications, such as Movtan Fishing and Compare Pictures, can be found on the Play Store.

I would like to thank my friends and family for their support during the course of writing this book.

About the Reviewers

Amey Haldankar is an Android enthusiast hooked on the platform since its early days. Equipped with a degree in Computer Science Engineering from GIT, Belgaum, he is working for HCL Infosystems Ltd. as a Senior Software Engineer.

Amey has been working on the platform for the past 3 years developing several applications for major clients such as Domino's, Galatsaray, HCL, and Nokia.

A note of thanks to the publishing house for considering me for the role of a reviewer for *Android SQLite Essentials*.

Gaurav Maru has a Bachelor's degree in Computers from Shah & Anchor Kutchhi Engineering College. Since 2011, he has been working as an Android application developer at various organizations, including India's largest retail sector company. Gaurav has developed various apps, including the one developed for the USA's largest bookseller (a Fortune 500 company). He drinks, eats, and sleeps Android. You can contact him at <gaurav1maru@gmail.com>.

I would like to thank my family, friends, colleagues, and Packt Publishing, who helped me pull this one off successfully. Cheers!
